

# THERMOPLASTICS FOR INJECTION MOULDING AND EXTRUSION PROCESSES

## OBJECTIVES

This course offers a comprehensive coverage of the main aspects of plastics technology like classification of plastics, general properties and processing behaviors of commodity, engineering, and high performance thermoplastics, polymer testings and major fabrication processes with more emphasis on injection moulding, and extrusion processes.

## WHO SHOULD ATTEND?

People working in plastics or related industries as

- Production personnel
- Quality / Technical control
- Materials supplier
- Sales & Marketing department
- New comers in plastics industries
- And other related industries

## WORKSHOP OUTLINE

- General classifications of plastics resins
- General properties and processing behavior of thermoplastics
- Plastics processing methods
- Polymer testing
- Thermoplastics
- Polymer additives

**SBL CLAIMABLE**
