

SUCCESSFUL PROJECT MANAGEMENT

AVAILABLE FOR OFFLINE

Technical Series

OVERVIEW

This course is intended for executives in technical and non-technical work areas, who need to acquire working knowledge and skill in planning, monitoring or tracking, measuring the implementation of client's projects. Their participation through an action-learning methodology will facilitate and immediate transfer of such competency to workplace.

Participants are encouraged to bring their projects to the session. The appreciation of project management software and techniques will be used to help participants better understand project management concepts; reflecting on their current project practices, and knowing how to improve them.

WHO SHOULD ATTEND?

- ✓ Executives who are directly involved in planning, estimating, scheduling,
- ✓ monitoring (tracking), and measuring, and
- ✓ reporting the implementation progress projects.

OBJECTIVES

Evaluate risk management planning of projects,

Determine task/project duration, and costs,

Determine which task(s) has overwhelming influence in project duration,

Track project progress and making project reports,

Have comprehensive understanding of the various processes of project management.
